

# Deliver Critical Notifications Quickly and Reliably

Recent historical events dictate the need for communities and businesses to broadcast communications to a variety of destinations quickly and efficiently. **This is no longer a luxury - but a vital necessity.** Responding to critical situations and delivering emergency or routine information in a timely manner is essential.

## Situational Awareness And Response

Whether the emergency occurs in a school, a healthcare facility or in any municipal environment, prompt and accurate communication is essential. The transmission of information in a crisis that triggers a prompt response by appropriate officials - along with message receipt documentation - maintains a high quality of safety, security, and maximum efficiency.

### When nothing less will do

**SARA** - Situational Awareness and Response Assistant is a flexible, software-based emergency alert system that integrates with a facility's existing emergency system and provides both automated monitoring and alerting to pagers, wireless telephones, email and other devices. SARA can broadcast a single emergency notification or multiple voice or text messages simultaneously to a variety of defined devices or groups of devices.

### How SARA works

**SARA** monitors almost any device - from smoke alarms to moisture sensors or mobile panic buttons - and turns any event into an alert that automatically notifies the proper authorities at any time of day or night. Any facility that needs rapid automated notification with simple administration can benefit from **SARA**.

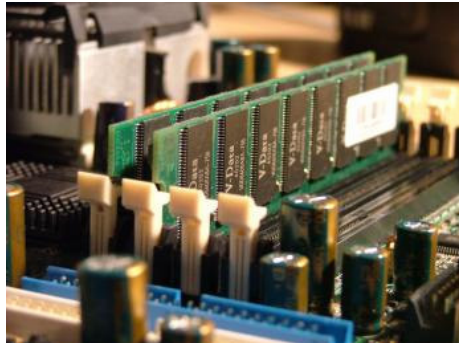

In today's critical security environment - ensuring an environment where awareness, safety, security, and accountability along with comprehensive historical reports are a requirement, **SARA** is the practical solution.

**Status Solutions**

# SARA responds to a wide variety of communication needs in any environment

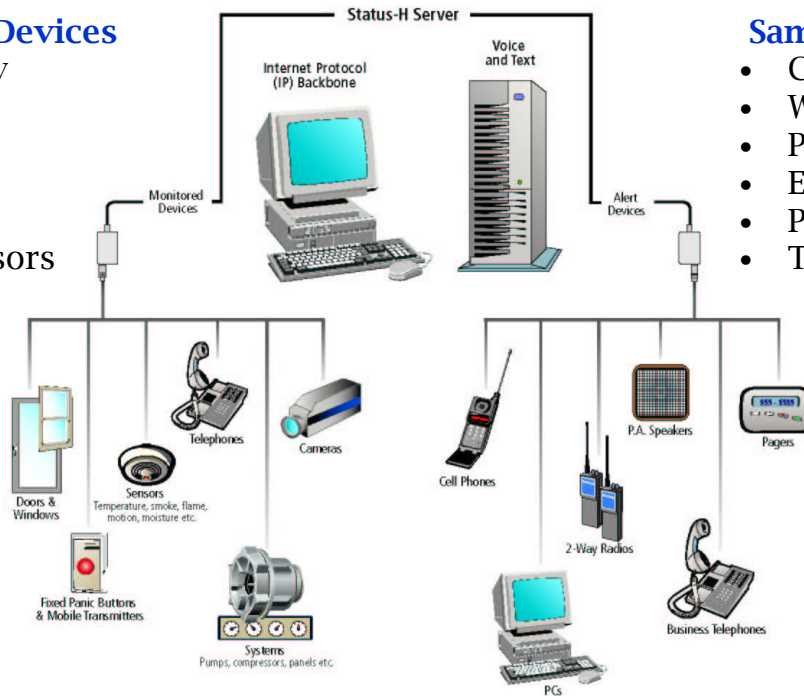

In schools, SARA acts in response to emergency situations in classrooms, to unauthorized entry at access points or vandalism. Because of Sara's flexibility, mobile staff persons can respond immediately to any situation. With a single mouse click, administrators can easily create parent lists and send out message reminders about early closing or any future event

Firefighters and police use SARA as a browser-based dialer to send messages quickly and efficiently to their members, singly or simultaneously to many. When teams of responders need to be alerted to a crisis, the functionality of SARA becomes a better alternative to paging or other notification systems. The unique system design provides easy modifications to the messaging process and makes notification operations more efficient.

## Sample Monitored Devices

- Perimeter security
- Mobile pendants
- Fire panels
- Smoke alarms
- Moisture sensors
- Temperature Sensors

## Sample Alert Devices

- Cell phones
- Wireless Phones
- Pagers
- E-mail
- Paging systems
- Two-way Radio
